

Market leading purchasing education

Climate Responsibility

Is it acceptable for trucks to travel hundreds of extra miles simply to refuel with diesel at the cheapest filling station? Climate issues concern all of us, and not least in the case of companies that are facing increasingly tough demands from both customers and legislators. Within the areas of purchasing and logistics, climate and environmental issues are of central importance.

Climate Responsibility

- The climatic impact of business
- Environmental communication
- Relevant environmental demands in a professional way
- Environmental auditing of suppliers

Climate Responsibility

Nobody can afford to ignore the question of climate. With a combination of sound knowledge and the right attitude, environmental expenses can often be transformed into profitable investments. The cost of ignoring or lowering the priority assigned to climate and environmental issues could be substantial, and affect the future of the company for a great many years to come. Put briefly, it is a risky business not having adequate knowledge of the company's environmental impact and environmental adaptation.

The course includes lectures, practical exercises and games. In addition, a number of learning tools are presented – including tools for environmental assessment and supplier auditing – that can be put to practical use by the participants after the course.

Contents

- The climatic impact of transportation
- The climatic impact of various materials
- Environmental communication
- Relevant environmental demands in a professional way
- Reducing the environmental impact of transportation
- Environmental auditing of suppliers
- Following up the company's environmental adaptation

Purpose and educational objectives

The goal is to provide you with the knowledge and insight necessary for you to understand the extent of the environmental impact of purchasing and logistics activities. The objective is to contribute towards increase your own company's environmental adaptation within these areas.

Who should attend?

Those of you who work with purchasing and logistics and who want to learn how your company's purchasing and logistics can be adapted to the climate so that the demands of the customers, the management and society can be fulfilled in a professional way.

The course is carried out as a day-course over two days.
