

Market leading purchasing education

Production Management

What does a purchaser need to know about production? Actually, quite a lot.

A profitable Supply Chain is conditional upon coordination between purchasing, logistics and production. But that is not enough. Already in conjunction with product and service development the functions, purchasing, logistics, and production need to be coordinated.

Production Management

- How to integrate purchasing, logistics and production!
- Modern production methods and strategies
- How product types and production affect purchasing and logistics functions
- Lean Thinking and Lean Production
- How the roles of purchasers and logisticians are affected by increased integration with production.
- Lean Thinking and Lean Production
- How the roles of purchasers and logisticians are affected by increased integration with production.

Production Management

This education is aimed at those people who are logisticians or purchasers who want more knowledge about how production affects purchasing and logistics as well as how the functions should be coordinated in the best way. Different types of production structures and how they affect purchasing and logistics are thoroughly reviewed. Major emphasis is placed on modern systems for production where lead times, productivity, flexibility and resource conservation are the focus.

(Production for purchasers and logisticians is included in the certification program in logistics and purchasing, CLSilf® and CISilf®, respectively, but is also given as an independent course.)

Contents

- What characterises and determines the work model for different types of products and production processes?
- How do you integrate purchasing – logistics – production?
- What is Lean Thinking and Lean Production?
- Analysis for choosing the right production strategy based on the market and product
- Reduction of lead times, adjusting times and part times
- How are resource needs determined by personnel and material?
- How does this affect the roles of purchasers and logisticians?

Purpose and educational objectives

To give you, as a purchaser and/or logistician, good insight into the production process and its development and to gain the skills that are required to be able to affect lead times, quality and costs.

Who should attend?

People who work with logistics and/or purchasing that want more in-depth knowledge in order to build a more efficient Supply Chain.

The course is carried out as a residential course over two days.

“Product types and production structure are of vital importance for how purchasing and logistics strategies are formulated.”
